

CYCLISTIC BIKE SHARE ANALYSIS

Understanding Behavioral Differences Between Annual Members and Casual Riders

Objective

Analyze historical Cyclicistic bike-share data to identify behavioral differences between annual members and casual riders and provide recommendations to increase membership conversions.

Total Rides

3,478,810

Members

2,051,851

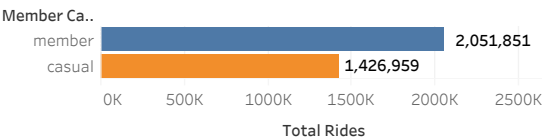

Casual

1,426,959

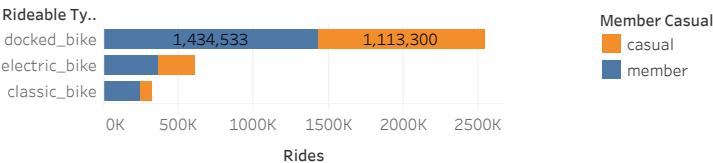

Avarage Ride Duration

61 min

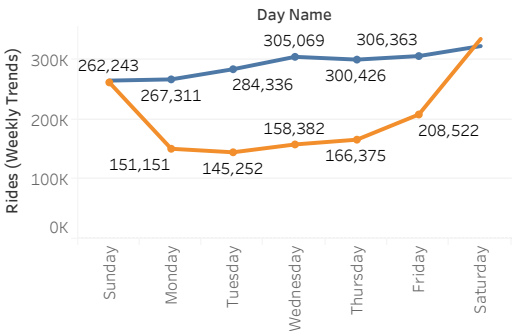

Ride Distribution by Membership Type

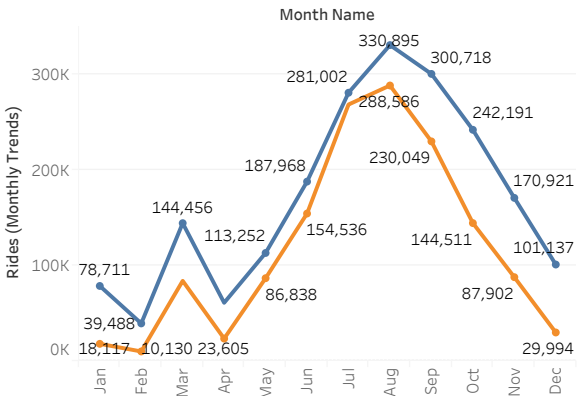

Bike Type Preference

Weekly Trends

Monthly Trends

KEY INSIGHTS

- Members generated 59% of all rides.
- Casual riders average nearly three times longer trips than members.
- Members primarily ride during weekdays, suggesting commuting behavior..
- Casual ridership peaks on weekends, especially Saturdays.
- Classic bikes are the most popular choice for both member types.
